

Steel Construction Project Safety

easi-edge Ltd. have considerable experience in delivering working at height edge protection solutions for structural steel construction projects.

easi-edge provides products that cover perimeter edges, internal voids, roofs, stairs, lift shafts, vehicle offloading and loading bays.

We can create detailed drawings showing where barriers should be placed, the type of post connections needed and the position of any holes that need to be drilled.

Our edge protection systems can be installed at ground level and offer total protection at all stages of the build. Providing a flexible solution, a variety of fixings are available to suit structural steel construction projects.

Ageas Bowl – Southampton

A major new redevelopment of the new Ageas Bowl complex, in Southampton, used easi-edge to solve their edge protection issues.

Challenging in its design, the easi-edge team worked closely with the project team at Denizen and steel fabricator, Morgans of Usk, to provide a tailored edge protection solution.

easi-edge supplied over 3,000 linear metres of bolt-on edge protection in total to this exciting project

Main Contractor: Denizen Contracts

Steelwork Contractor: Morgans of Usk

The Town Hub – Doncaster

The first of the two health centres is The Town Hub in central Doncaster.

This new build comprised four storeys and accommodates a GP practice, dentistry facilities, a pharmacy and a drop in centre.

easi-edge supplied over 750 linear metres of bolt-on edge protection including stair protection.

Main Contractor: Morgan Sindall

Steelwork Contractor: Hambleton Steel

Luton Student Accommodation – Luton

Located in the heart of Luton town centre, the accommodation features a glass fronted rotunda building and three other L shaped buildings.

The project utilised trail-arrest to prevent falls whilst offloading materials, and 4,000 linear metres of perimeter edge protection and stairs.

Sister company hoard-it has supplied their innovative hoarding system to the project to protect the public from the construction work being carried out.

Main Contractor: Kier Marriott

Steelwork Contractor: Billington Structures

System benefits:

- Project specific solutions
- Class leading solution - our barriers exceed the requirements of BS EN 13374
- Free technical team experience and skills during design
- Latest detailing software to freely detail your fabrication requirements
- Full logistics management included
- easi-edge barriers can be installed at ground level for greater safety
- On site field engineers to train.

About easi-edge

easi-edge are an established leading site safety solutions company, providing products that cover perimeter edges, internal voids, roofs, stairs, lift shafts, vehicle offloading and loading bays. Part of a long established group of construction companies, we can trace our history back many years, over which we have applied our expertise and experience, listened to our valued clients and developed what we believe are optimum industry solutions.
